TSA SECTION 1 - 2021

1

The correct answer is D

The main conclusion is D as this includes options B, C, as well as the context A and the assumption E.

2

The correct answer is B

They will flash at the same time once every two minutes (after 120 seconds).

3

The correct answer is D

The argument simply explains that 'there are problems associated with the compostable bags' but does not expand on this or provide facts and figures. B is not valid as focusing on one alternative is fine to make an argument, C is not relevant, and A and E are not valid as plastic waste is a widely known problem.

4

The correct answer is B

The argument here, simplified, is that if you consent to an arrangement you cannot then complain about it. This is best illustrated by option B. D involves trickery and A involves someone being taken against their will/consent (kidnapped).

5

The correct answer is D

The overarching argument here is that not all apologies are genuine, and that sometimes people apologise for other reasons.

6

The correct answer is D

The shift parameter is 14 (J to X) so the E becomes S

7

The correct answer is E

The 'Breathe' mask is the only one that satisfies each requirement in the paragraph (e.g. urban and rural environments both covered)

8

The correct answer is D

101110010100 features in both samples when extraneous bits are removed

9

The correct answer is C

C is the best summary of the conclusion as it is general and includes other pieces of information within it - specific pieces of information like B, for example.

10

The correct answer is E

If E is true it completely derails the argument, as we must theorise that there are other reasons for people being

sedentary, rather than just the existence of mobile phones. A and D would also weaken the argument but less completely than E.

11

The correct answer is E

The argument here is that people don't like X because Y [minor detail]. Therefore if they knew the minor detail wasn't true, they wouldn't have a problem with X. This is best seen in E, where conservatives are X and being posh is Y.

12

The correct answer is D

They save $650

Per visit is (10 + 10 + 6 + 6 + 3) = 35
30 visits is 1050
1050 - 400 = 650

13

The correct answer is C

There are four possible combinations
Bacon, eggs, toast, tomatoes
Bacon, toast, tomatoes, beans
Sausage, eggs, toast, tomatoes
Sausage, toast, tomatoes, beans

14

The correct answer is D

270 is 15% so 1% is 18
20% of the cyclists are over 40 so 20 * 18 = 360

15

The correct answer is B

The government can only promote marriage if it has a right to do so; therefore B is correct. Promoting marriage is making a judgement on how people conduct relationships, as B states.

16

The correct answer is A

This verbose passage essentially states that curtailing freedoms is acceptable to prevent disastrous short term consequences - which is best illustrated through option A. E is 'advised' rather than a legal requirement.

17

The correct answer is D

It uses one specific example to draw a broad conclusion, as D states. B is also a valid point - more land use for farming might not necessarily be bad if the land would alternatively be used for industry, for example.

18

The correct answer is D

Tim lands at 4pm his time which is 3pm central time
Jerry arrives at 2pm his time which is 4pm central time

19

The correct answer is B

The best option would be a family of 5 (57) + 1 child (11) + senior citizen (13). Total is therefore $81.

20

The correct answer is E

You need to compare the sales to the number of customers - the area that has the highest ratio of area of sales to customers is first, and the area with the smallest ratio of area of sales to customers is last. Therefore furniture is first, then clothes (both have more sale area than customers area) then stationery which is roughly equal, then food.

21

The correct answer is C

C is the best summary of the argument, which states that we have already given aliens enough in the way of signals, so it's now too late to be concerned. Other options don't fully summarise the extract.

22

The correct answer is B

B most strengthens the argument as it implies that the women would have no reason to take folic acid supplements, despite needing them. A and D weaken the argument and C and E are excess information.

23

The correct answer is A

A is a logical conclusion as the passage outlines that 'we can… better imagine that… we'll need a clean, well-run hospital than a decent criminal justice system.' The article doesn't imply that people aren't aware of the state of prisons,C is not stated, D is possible but not necessarily true ('others say that…') and E is not stated

24

The correct answer is B

They need extra sets to cover the extra capitals. We know they have three sets of letters as there are three Es in 'the force awakens' so now they need a total of 4 sets in order to capitalise the entire phrase

25

The correct answer is C

40 small loaves is 240 * 40 = 9600g
50 large loaves is 400 * 50 = 20000g
Total 29600g - call this 30000 = 30kg
Unbaked dough is therefore 30 / 0.8 = 37.5kg
→ 2.5kg wasted
→ Buys 40kg of dough and throws away 7.5% of it

26

The correct answer is E

The largest difference is Malawi, the third bar, which means either A, B, D or E
Less than 10% difference for Angola means A or E
Greater than 30% for Namibia means E

27

The correct answer is B

The argument made here is that one should not access confidential information that is accessible through one's job. Only B fits this. E does not as this is not specific confidential information - just information that is gained through talking to others, and the actions taken as a result of the information are correct.

28

The correct answer is D

The logic here is that as X causes Y (although Y has numerous other causes) and Y is the case, then you must have done X. D shows this logic with X being YOU turning up the volume and Y being the music being loud.

29

The correct answer is C

C is the simplest and broadest summary of the points; it includes other information like D and E.

30

The correct answer is C

108/0.9 = 120

Therefore 2 dollars per person, so 40 dollars for 20 extra people

31

The correct answer is D

Remember to factor in the early booking discount, and that supplement prices are per night. The total will come to £3049.20 with all factors included.

32

The correct answer is E

Total circle is 23, total square is 23, total triangle is 14; this fits the left pie chart perfectly as circle and square are equal and almost twice as large as triangle

Milk is total 30 which is exactly the same as the total of white and dark together, fitting the right pie chart

33

The correct answer is A

The passage states that populations of rats will continue to grow - however this doesn't take into account that we could well find an alternative poison that works to control their numbers.

34

The correct answer is E

The passage focuses entirely on whether or not it is the correct solution for those committing the crimes - not whether or not imprisoning them is the correct solution for society, in order to keep others safe. E is therefore correct.

35

The correct answer is B

If charities were better than governments at dealing with these issues, then money is better spent with them than as tax dollars for the government. A doesn't impact the argument hugely as taxpayers' choice is less important than what is truly required. E would strengthen the argument as would D.

36

The correct answer is E

You cannot make 6; you could make 7 or 5 (5 with one red circle, one blue circle)

37

The correct answer is A

6 days travel, 15kmwalking per day average = 90km total walking
5th day 90km total of which 30 is by bus - therefore 60km walked
Therefore they must walk 30km the final day

38

The correct answer is C

The percentage of males decreased from (25 / (25+35)) to (45 / (45 + 70))

39

The correct answer is C

C is the best summary of the main conclusion as it includes other sub-conclusions like B or E

40

The correct answer is D

The argument here is that for X to happen, the temperature must hit Y point. As X has happened, Y must have been reached. This is best seen in D, where X is iron melting and Y is 1538C.

41

The correct answer is C

The overall conclusion here is that those who push alternative medicine ought to be more open to the role of placebo, as it is 'a perfect example of the mind and body working together'

42

The correct answer is D

The number is 4916

43

The correct answer is B

The difference is 2 hours 53 minutes - the maximum time is an arrival at 10:44 at Aki's house and a return leaving her house at 14:57, the minimum is an arrival at 11:14 and leaving her house at 12:17

44

The correct answer is D

The total of all values is 1856, so July must be almost exactly 90 degrees. There must be one co,ponent larger as well. There is no part as small as the smallest area in E, so D is the correct option.

45

The correct answer is E

If the goal is to protect tenants from unscrupulous behaviour, then it must be guaranteed that the new landlords are going to act better. If this is not guaranteed, then the steps taken could be for nought - as is expressed in option E.

46

The correct answer is D

£65.50
Add cash fee in the UK + goods fee abroad to the total percentage minimum payment for all goods (2% minimum)

47

The correct answer is A

The argument being made is that we should not reward people for natural talent. This is best illustrated by example A.

48

The correct answer is E

	floor area	Land purchase	Totals
Calypsio	1000	450	$3,270,000.00
Jaspoon	2000	350	$6,210,000.00
Menoko	1500	500	$4,800,000.00
Sontorius	1300	400	$4,140,000.00
Zentium	1600	350	$5,010,000.00

49

The correct answer is C

As the extract says, 'these reforms must be enacted as a matter of urgency' - the main conclusion is just that, that the reform process must happen as quickly as possible. A, B, D and E all evidence this and are part of the main conclusion.

50

The correct answer is A

Thursday will fall on the 22nd of this month.
